photosystem II 3.7% protein - spinach (fragment)
Cispecies: Spinacia oleracea (spinach)
Cispecies: Spinacia oleracea (spinach)
Cibate: 01-Dec-1989 #sequence_revision 01-Dec-1989 #text_change 18-Jun-1993
CiAccession: S01122
Rischroeder, W.P.; Henrysson, T.; Akerlund, H.E.
FEBS Lett. 235, 289-292, 1988
A;Title: Characterization of low molecular mass proteins of photosystem II by N-terminal A;Reference number: S01120
A;Accession: S01122

A,Molecule type: protein A,Residues: 1-12 <SCH> C,Keywords: chloroplast; photosynthesis; photosystem II; thylakoid

A, Residues: 1-13 <OND>
A, Note: the structure of the peptide was confirmed by synthesis
A, Onement: This peptide also potentiates bradykinin by inhibiting the kinases that inact
C, Superfamily: bradykinin-potentiating peptide
C, Superfamily: bradykinin-potentiating peptide
C, Keywords: angiotensin-converting enzyme inhibitor; pyroglutamic acid
F;1/Modified site: pyrrolidone carboxylic acid (Gln) #status experimental
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              C. A, Molecule type: protein
A, Residues: 1-13 - HUJ>
A, Experimental source: bone marrow
A, Experimental source: bone marrow
A, Experimental source: bone marrow
C, Comment: This peptide belongs to a family of Cys-rich, carionic peptides of low molecul
C, Comment: This peptide has antimicrobial activity by a non-oxygen-dependent mechanism.
C, Superfamily: unassigned animal peptides

-!-FUNCTION: This peptide both inhibits the activity of the angiotensin-converting enzyme and enhances the action of bradykinin by inhibiting the kinases that inactivate it.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Predel R., Kellner R., Nachman R.J., Holman G.M., Rapus J., Gaede G., "Differential distribution of pyrokinin-isoforms in cerebral and abdominal neurohemal organs of the American cockroach."; Insect Biochem.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       "Angiotensin-converting enzyme inhibitors from the venom of Bothrops jararaca. Isolation, elucidation of structure, and synthesis."; Biochemistry 10:4033-4039(1971).
-!- FUNCTION: This peptide both inhibits the activity of the angiotensin-converting enzyme and enhances the action of bradykinin by inhibiting the kinases that inactivate it.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             21-JUL-1986 (Rel. 01, Created)

Peptides 11:849-856(1990).
-!- FUNCTION: Increases the force of neurally evoked contractions in the major power-producing flight muscles, the dorsal longitudinal muscles and so is likely to play a role in sustaining or promoting flight behavior patterns.
-!- SIMILARITY: Belongs to the FARP (FMRFamide related peptide)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0,
                                                                                                                               Sequence 17, Application US/09845917A

Patent No. 6653529

GENERAL INPORMATION

GENERAL INPORMATION

APPLICANT: Bogaert, Thierry

APPLICANT: Vandekerckhove, Joel

TITLE OF INVENTION: PROCESES FOR THE IDENTIFICATION OF COMPOUNDS WHICH

TITLE OF INVENTION: OWNTROL CELL BEHAVIOUR, THE COMPOUNDS IDENTIFIED AND

TITLE OF INVENTION: USE IN THE CONTROL OF CELL BEHAVIOUR

TITLE OF INVENTION: USE IN THE CONTROL OF CELL BEHAVIOUR

TITLE OF INVENTION: USE IN THE CONTROL OF CELL BEHAVIOUR

CURRENT APPLICATION NUMBER: US/09/845,917A

CURRENT FILING DATE: 2011-04-30

NUMBER OF SEQ ID NOS: 58
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .
